Scaling Procedures: Issues and Applications By Richard G. Netemeyer, William O. Bearden, Subhash Sharma

Scaling Procedures: Issues and Applications examines the issues involved in developing and validating multi-item self-report scales of latent constructs. Distinguished researchers and award-winning educators Richard G. Netemeyer, William O. Bearden, and Subhash Sharma present a four-step approach for multi-indicator scale development. With these steps, the authors include relevant empirical examples and a review of the concepts of dimensionality, reliability, and validity.

Scaling Procedures: Issues and Applications supplies cutting-edge strategies for developing and refining measures. Providing concise chapter introductions and summaries, as well as numerous tables, figures, and exhibits, the authors present recommended steps and overlapping activities in a logical, sequential progression.

Editorial Review

Review

"I recommend this book to any researcher (graduate student, academic, social scientist) who is considering developing a summated rating scale. For those who are already sophisticated in psychometrics and data analysis (factor analysis and generalizability theory analysis), the book provides a clear outline of what needs to be done."--Robert G. Jones "Personnel Psychology Book Review Section "
